

The folder "Codes_and_Data"

Programs used to collect the experimental data

- Folder "zTree" contains the four ztt files, used to run the treatments, as well as a ztq file, used to administer the questionnaire

Datasets

- **Folder "RawData" contains the raw session data:**
 - Behavioral data
 - Chat messages from all deliberation treatments: FullyPublic, TopDown, TopDownClosed (whites' private chat) and TopDownClosed (public chat)
 - Questionnaire data
- **Folder "StataData" contains the processed data in the format that was used for data analysis**
 - BrandtsGerhardsMechtenberg_data.dta
- Variables in these datasets are labeled to clarify their meaning

Do files

- **Folder "StataData" contains two do files:**
 - do_file_EXEX_final.do contains all analyses performed to arrive at the results presented in the paper
 - generating_equil_payoffs.do is needed to create ESM Tables B.3 and B.4
- More detailed descriptions are given in the do file

Feel free to contact the author team in case you have any questions regarding the data collection, data preparation and/or analyses.
